3 H.P. AIR COMPRESSOR

This is a single-cylinder, vertical, air-cooled compressor. Capacity

22 cubic meters free air per hour to pressure of 6 atmospheres.

The machine is driven through V-belt by a 2.2 KW. motor,

mounted on a horizontal air reservoir of 150 litre capacity. The unit is

easy to move around as it is fitted with wheels.

The flywheel also performs as a fan, effecting cooling efficiently.

The crankshaft is fitted with ball bearings, ensuring smooth running.

Lubrication is performed by the rotary crankshaft carrying the lubricating oil

from the crank case to all the rotating parts.

A pressure gauge and a spring safety valve are fitted onto the air

reservoir. When a pre-regulated pressure, range 4 to 6 atm. at will, is

exceeded, the machine will be stopped automatically. A filter is provided

for filtering exhaust air and a pressure regulating valve for regulating the

exhaust pressure.

This machine, as the main source of supply of compressed air in

workshops, is used for driving various kinds of pneumatic tools for spraying

lacquer, cleaning machines, etc.

Intake Capacity:

22 m³/hr. (775 ft³/hr.)

Pressure

6 atm. (85 lbs/in²)

Speed

650 rpm.

Motor:

Type A. C., 3-phase, Induction type.

Power 2.2 KW.

Speed 1400 rpm.

Voltage 220/380 V.

Frequency 50 cycles

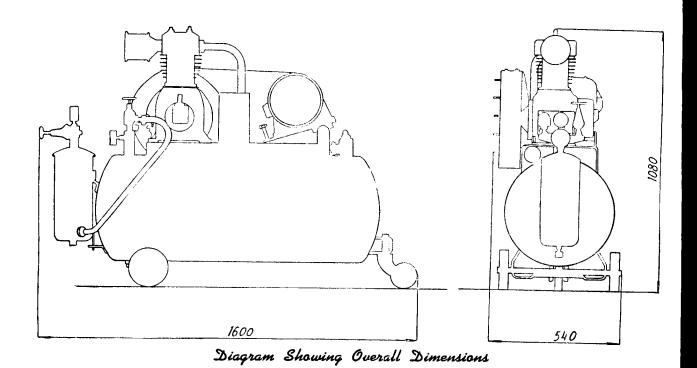

Air Reservoir:

Capacity 150 litres

Pressure 10 atm.

Overall dimension (LxWxH) 1600x540x1080. mm.

Net weight 243 kg.

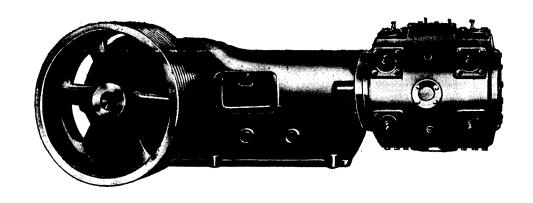

N.B.—For improvement of the machine, we reserve the right to alter either the design or the specification.

AIR COMPRESSOR

This Air Compressor is of single cylinder, double acting, horizontal, water cooling type. Capacity ## cubic meters free air per minute to pressure of 7 atmospheres.

It is advisable to supply cooling water by coolant pump, but pipe water may also be used. Lubrication of the various parts of this machine by means of splashing and injection. Supplied with automatic pressure regulating device, the compressor being economical in the consumption of power and ensuring safety against excessive pressure in air receiver.

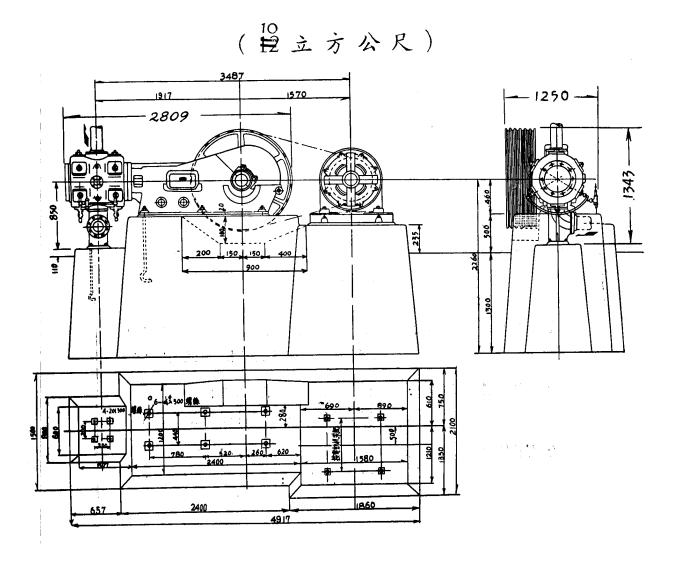

The machine is used in mines, civil engineering works and industrial plants, wherever compressed air is needed for pneumatic tools.

TOOL GRINDER Model M6250K

中國機械進口公司 CHINA NATIONAL MACHINERY IMPORT CORPORATION

> ER-LI-KOW, SHIH-CHIAO, PEKING CHINA CABLE ADDRESS: "MACHIMPORT" PEKING

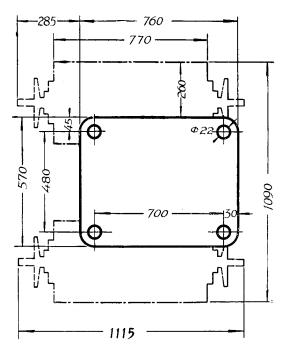

フ 具 磨 床 TOOL GRINDER MODEL M6250K

This machine is suitable for grinding carbide tools. The carriage is composed of lower slide, upper slide, and rotary table. The tool to be ground is clamped by special holding fixture and subjected to cooling action during grinding.

The cross travel of lower slide along guideways and the longitudinal travel of upper slide along the working surface of grinding wheel are both effected by hand; the swivel of working table which is fixed on the upper slide, may be adjusted according to scale.

SPECIFICATION

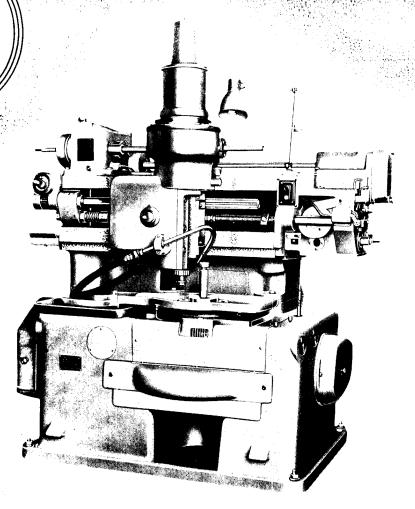

Max. size of tools to be	ground	 		 	 	 			50 x 50	mm.
										. 2
Outside diameter of wheel		 		 	 	 			250	mm.

SPUR GEAR SHAPING MACHINE

Model J546

This machine is used for shaping internal and external spur and helical gears.

The machine works on the generating principle of workpiece and cutter rolling together. It can be employed to cut helical gears when a special copying guide is fitted on the spindle of this machine.

This machine can also be used to cut gears such as stepcone gears, gears with shoulder, etc., which provide very little recess for the run out of cutter during cutting.

The number of reciprocating strokes and circular feeds of cutter are regulated by the gear box and the feeding box respectively. The indexing mechanism is controlled by means of change gears. The stroke of cutter can be adjusted by changing the position of set pin on the crank mechanism.

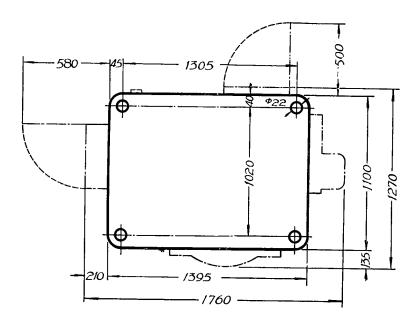

The teeth of the gear may be shaped by cutter in one, two, or three strokes. The number of strokes and the feeding rate of first, second, and third stroke are controlled by means of a special mechanism.

The directions of rotation of the cutter spindle and the working table are independent of each other.

SPECIFICATION

Min. and Max. module		•		2-6
Min. and Max. outside diameter of spur gear .		•	20-462	mm.
Max. outside diameter of helical gear				
(spiral angle 23°)	•		462	mm.
Max. outside diameter of internal gear			550	mm.
Max. face width of gear:				
External			105	mm.
Internal	٠		75	mm.
Max. helix angle for helical gear				23°
Max. pitch diameter of gear:				
External		•	450	mm.
Internal (when cutter of 100 mm. dia. is used)			400	mm.
Max. distance between centres of work and cutter			350	mm.

Diameter of working table					24	0 mm.
Max. stroke of slide					128	5 mm.
Min. and Max. distance between work						
table and lower face of cutter hea	_			. 3	35-16	mm.
